

```
//This programme finds the length of a given word

#include <iostream>
#include <string> // This library defines string handling for the programme

void main() {

    std::string word; // Declaring a variable

    std::cout << " Enter a word to find its length" <<std::endl;

    std::cin >> word;

    std::cout << "The length of the word is:  " << word.length(); // the function "length()"
operating on "word"

    std::cout << std::endl;

    system("pause");

}
```
